BUILD WITH AI · CODE FOR COMMUNITIES

Citizen demand, placed where public money is decided.

A digital public good for India. People file infrastructure needs in their own language. A planning desk receives a short, explainable list.

Digital public infrastructure and governance
Twelve languages · Voice, text, and messaging

THE PROBLEM

Requests and budgets live in different places.

Citizens already say what they need. The money for the year is decided somewhere else, on last year’s pattern.

Scattered asks

Water, roads, clinics, and schools are reported on WhatsApp, missed-call lines, and portals that do not share a ledger.

Budgets follow habit

Scheme lines tend to follow places that already have coverage and the capacity to spend, not the loudest unmet need.

No single room

A planning desk cannot yet say, with evidence, whether this year’s rupees met this year’s ask.

THE PRODUCT

One ledger. Three moves.

Every channel writes the same record: place, language, need, severity, and a reference the citizen can track.

01

Hear

Text, smartphone voice, a feature-phone missed call, SMS, or a messaging thread. Twelve Indian languages, including Hindi in Roman script.

02

Place

The record is read for language and need, then set beside population, rural share, deprivation, coverage, and the scheme line.

03

Choose

The desk gets hotspots, a shelf for quiet districts, and a cabinet note. The note helps a decision. It does not sanction money.

Four ways in. One row on the ledger.

A missed call from a feature phone and a WhatsApp-style message become the same kind of evidence.

Text and SMS

A written request, including a 160-character message, in the language people actually use.

Voice

Smartphone speech in the speaker’s language, or a keypad after a missed call.

Any need

Water, roads, power, a clinic, a school, sanitation, a house, or a phone network.

Same record

Place, language, sector, severity, channel, and a reference. Nothing else is required.

THE SCORE

Four questions. Published weights.

A tie between two needs is refused. The desk asks, rather than guessing.

34

Demand

How many people spoke, and how loud it is per lakh residents. A large district is not erased. A handful of messages cannot win alone.

30

Deficit

100 minus the coverage index. A district still off the drinking-water network scores higher than one that is mostly connected.

20

Equity

Rural share and deprivation. The same complaint carries more weight where people have less.

16

Money

Share of voice in that sector, minus share of the scheme line. Money that follows last year’s coverage shows up here.

THE PLANNING DESK

What a minister can see in one screen.

Figures are from the demonstration ledger, shaped from public scheme patterns. They are not official statistics.

1,830	12	12	₹199 Cr	9.08 lakh
Citizen records	Languages heard	Hotspots	Short on the six notes	People in those projects

The six notes are a portfolio: different needs, different states, plus one seat for a district that is badly served and barely heard.

People named here are project beneficiaries. A person can appear in only one note on that list.

A CABINET NOTE

Rayagada, Odisha

Roads · PMGSY

All-weather link roads for habitations cut off in the rain. The note explains the gap in plain language and shows the citizen records behind it.

75	Priority
₹19.5 Cr	Indicative package
₹0.8 Cr	Already on the scheme line

A decision aid.
Not a sanction.

THE UNDER-HEARD SHELF

A quiet ledger is not a clean chit.

Malkangiri, Odisha is on this shelf for digital connectivity. Coverage is 16 out of 100. Voice reach is 16 percent. Only 2 records are on file.

Shown as it is

Sparse complaints are not multiplied to look like a crowd.

Still at the table

High deficit and low voice earn a seat beside the hotspots.

Silence is weak evidence

Where few people can file, quiet does not mean the need is met.

A DIGITAL PUBLIC GOOD

Readable. Optional model. No Aadhaar.

The core engine runs on the server. Citizen text is not sent to a model vendor.

No account

A request needs a place and a need. A full phone number is never stored. The receipt is a reference.

Published method

The four weights are fixed and the same for every state. Anyone can read why a district rose or fell.

Open ledger

The demonstration data can be downloaded, without names.

Gemini stays optional

If a key is set, it may rewrite a note from the published numbers only. The words of the citizen stay home.

JanSetu

Hear the country in the language it speaks.
Then put that demand next to the money.

File a request · Open the planning desk · Read the method
